// It is a vehicle that will last far longer than your car. //

### How did you get your ELF?

Last July, I bought my ELF when the company started a Kickstarter request to help the company start ELF production. Mango ELF Kickstarter #31 is a year old!

### What do you think about the ELF's price?

For those who talk about it being expensive: I say, yes, there is a cost, but far less than any car: no gas, no carbon footprint and it is a vehicle that will last far longer than your car. Time to change your mindset, folks.

### How do you use the ELF?

In one year I have rode more than 1300 miles with my dog Trooper. It is my second vehicle, but wish I could stop driving my gas vehicle and use only the ELF.

### What do you like best about the ELF?

I am not purchasing any gas, I am protected from the elements and I have seen thousands of smiles, hand waves, car honks and questions. Look into the cost of other human powered vehicles - they are far pricier than the ELF, they are not enclosed, they can not hold all the groceries and your pet too and they are not made in the United States. I consider it a mind set change. I am getting exercise, I am not polluting and this vehicle will outlast my car.

### What do you have to say to potential ELF owners?

Think about it, check it out, contact Organic Transit. Save your money and invest in a clean green future, a healthier lifestyle and providing smiles to those who see you on the road.
